OBJECTIVE

Looking for an internship in front-end or full-stack web development.

ABOUT

Computer Science undergraduate at Mackenzie Presbyterian University (São Paulo, Brazil) and a graduate of ETEC's technical program in Systems Development. I build web applications with React and TypeScript, working across REST API consumption, database-driven features, and team-style Git workflows involving branches, pull requests, and code review. Advanced/fluent English.

ACADEMIC EXPERIENCE / PROJECTS

FitMeta React · TypeScript · Supabase · React Query

- Created a fitness-tracking web app where users sign in and manage their training routines through full database-backed CRUD.
- Handled server-side data fetching and caching with React Query, along with shared application state across screens.
- Wired authentication and data persistence to Supabase, adding route guards that limit access to signed-in users.
- Organized the codebase into reusable components with scalability and long-term maintenance in mind.

fitmeta.com.br

Docgen React · TypeScript · Ollama · Vite

- Built a tool that reads source files across 10+ programming languages, identifies the language on its own, and outputs organized technical documentation.
- Powered the generation with a locally hosted LLM via Ollama, removing any dependency on cloud services or API keys.
- Worked within a real team-style Git process — branching, opening pull requests, and reviewing code — to mirror an industry workflow.
- Assembled the front end with React, TypeScript, and Vite around a component-driven structure.
